

Species
Long-Billed Curlew (*Numenius americanus*)

Potential Habitat
Breeding and Non-breeding, Winter and Summer

Known Habitat
 Breeding, Summering
 Non-breeding, Summering
 Non-breeding, Winter and Summer
 Breeding and Non-breeding, Winter and Summer

This potential habitat model was created by the Southwest Regional Gap Analysis Project based on literature review and input from New Mexico Department of Game and Fish. Model attributes include 8-digit Hydrological Unit Codes, land cover, elevation, slope, aspect, distance to hydrologic features, and land form. Potential habitat models identify areas that are likely suitable habitat for a species, but which may or may not be occupied. Models are provisional final habitat models; for information regarding methods, results, and data accuracy, refer to <http://fws-nmcfwru.nmsu.edu/swregap/>.
